INTELLIGENCE
AND RESEARCH**

NO. 48

SEPTEMBER 15, 1972

ISSUED BY
THE GEOGRAPHER

This paper is one of a series issued by The Geographer, Bureau of Intelligence and Research of the Department of State. The aim is to set forth the basis for national arrangements for the measurement of the territorial sea or the division of the continental shelf of maritime nations.

This research document is intended for background use only. This document does not represent an official acceptance of the United States Government of the line or lines represented on the charts or, necessarily, of the specific principles involved, if any, in the original drafting of the lines. Additional copies of the studies may be requested by mail from The Geographer, Department of State, Washington, D. C. 20520 or by phone (Telephone 63-22021 or 63-22022).

INTERNATIONAL BOUNDARY STUDY

Series A

LIMITS IN THE SEAS

No. 48

STRAIGHT BASELINES: FINLAND

The Geographer
Office of the Geographer
Bureau of Intelligence and Research

STRAIGHT BASELINES: FINLAND

The Government of Finland decreed on August 18, 1956, a new law on the territorial sea for the state. The law-decree, No. 463, permitted the drawing of straight baselines about the coast of Finland:

Article 1.

The Finnish territorial waters comprise the part of the sea directly connected with the country's land area which in the East, adjacent to the Soviet Union, is bounded by the country's maritime frontier in the Gulf of Finland through the Virolahti archipelago, defined in the Paris Peace Treaty (690-691/47) signed on February 10, 1947; and in the West, adjacent to Sweden, [is bounded] by the country's maritime frontier and the extension of the end thereof into the Perameri Sea in the Tornio archipelago, defined when the boundaries were fixed in 1926 - 1927 according to the topographic boundary declaration signed in Tornio on January 19, 1811, after the Hamina Peace Treaty. The outer limit of the territorial waters toward the open sea is the boundary of international waters, except in the Ahvena [Aaland] Sea, to the South and North of the rocky isle of Market. There the limit is the country's maritime frontier as defined in the above-mentioned boundary declaration of 1811, as it was included in the agreement signed on October 20, 1921 (64/22), regarding the neutralization of Aaland Islands.

A solitary island, rocky isle, skerry, or a group formed by these, situated far out in the sea, may have separate territorial waters of its own.

Article 2.

The territorial waters are divided into inner territorial waters and outer territorial waters, or the marginal sea.

Article 3.

By inner territorial waters are meant that part of the territorial waters which is bounded on the shore side by the mainland and the estuaries of rivers, and on the seaward side by a line and the angles or base points of which are located at the farther points of land, either on the mainland, on islands, rocky isles or skerries.

Article 4.

The base points intended in Article 3 above are so chosen.

(1) that they are above sea-level more than one half day per year, on the average, at low-water levels during the ten-year period preceding the year when this law takes effect;

(2) that their distance from one another is at most twice the width of the marginal sea; and

(3) that the inner territorial waters will be as extensive as possible. The base points will be corrected at intervals of thirty years.

Article 5.

The marginal sea is a zone directly adjacent to the inner territorial waters. Its outer limit, the limit of international waters, is four nautical miles, or 7,408 meters, distant from the outer limit of the inner territorial waters, unless otherwise specified in this law.

Article 6.

If an island, rocky isle, a skerry, or a group formed by these is situated so far out in the sea that it remains beyond the outer limit of the inner territorial waters defined in Article 3 and 4, such an island, rocky isle, skerry or group shall have separate territorial waters of its own, but the width of such waters shall be three nautical miles, or 5,556 meters.

Article 7.

From the Southern terminus of the country's Eastern maritime frontier the outer limit of territorial waters runs at a distance of four nautical miles from the farthest points of land to the Eastern terminus of the [Southern] limit of the Finnish maritime frontier as defined in the Paris Peace Treaty signed on February 10, 1947, which is a parallel of latitude South of the Haapasaari archipelago, where it joins the said frontier.

From the Western terminus of the [Southern] frontier mentioned in paragraph 1 above, by which the Finnish territorial waters are bounded, the outer limit of the marginal sea runs to the west along the extension of the said border, until it joints the outer limit defined in Article 5.

In the Tornio archipelago, of the Gulf of Finland, the base point which follows the last base point on the Finnish side is on the Swedish side.

Article 8.

The base points of the outer limit of the inner territorial waters and their exact locations will be listed in a decree, which will also give a more detailed explanation of the water-level intended in Article 4, as well as other stipulations which may be necessary for the enforcement and the application of this law.

Helsinki,

President of the Republic
URHO KEKKONEN

Foreign Minister Ralf Törngren

Approved Finnish Diet: May 23, 1956.

By supplemental decree, No. 464, 180 points along the coast were selected for the straight baseline system. The points are:

SUMMARY

The Finnish straight baseline system has been printed on large-scale charts published by the Finnish Hydrographic Office. The most recent editions, which have been examined by this office, were printed in 1965.

The law contains three interesting concepts. First, the system is subject to a periodic review. According to Article 4(3), the points must be corrected at intervals of 30 years. Second, the Government of Finland has commenced its straight baseline system by connecting Swedish and Finnish islets; the intersection of this line with the Finnish-Swedish maritime frontier marks the beginning of the Finnish system. This unusual technique has been employed by several North European states.

The third, and most important, concept is stated in Article 4(2) which provides that the basepoints will be chosen so that their [basepoint] distance from one another is at most twice the width of the marginal sea...." As a consequence, the longest Finnish straight baseline segment measures 8 nautical miles or less in length, a restriction which contrasts sharply with the practices of many states. The limitation of the length of baseline segment means that the Finnish system nearly duplicates the configuration of the fringing islands. The Finnish system is the least expansive straight baselines yet analyzed by this office.

The total length of the Finnish system measures approximately 793.2 nautical miles between the Swedish and Soviet maritime frontiers. The average length of a segment is approximately 4.4 nautical miles.

The Finland-USSR territorial sea boundary is discussed in International Boundary Study No. 74 - February 1, 1964, Finland-USSR Boundary. The continental shelf boundary is analyzed in International Boundary Study, Series A, No. 16 - May 25, 1970, Limits in the Seas, Continental Shelf Boundary: Finland - Soviet Union.

Finland is a party of the Convention on the Territorial Sea and Contiguous zone.

NOTE: Not all points are shown on the attached map. Certain basepoints were too close to identify on the mapped scale.
