

closer to the Greek island of Othoni than to the coast of Italy; at point 8, where the boundary point is 6.1 nautical miles closer to the Italian coast than the Greek island of Kefallinia; and at points 15 and 16, where the boundary lies 1.8 to 5.5 nautical miles nearer to the Greek island of Stamfani<sup>1</sup> than to the coast of Sicily (see table). The rest of the turning points are calculated to be within 1.5 nautical miles of the apparent median line. The agreement makes provision for the eventual extension of the boundary line northward from point 1 and southward from point 16. Point 1 is situated 28.0 nautical miles from the coast of Albania. Point 16 lies 185.0 nautical miles from Malta and 21.6 nautical miles from Libya.

As in earlier agreements between Italy and its neighbors,<sup>2</sup> the problem of the exploitation of shared resources extending on both sides of the boundary is addressed (Article II). Dispute settlement by the International Court of Justice at the request of one of the parties, "or to any other international authority chosen by common agreement," is provided under Article IV.
