

## DRAFT OVERVIEW – PEPFAR Strategy: Vision 2025

Through the PEPFAR Strategy: Vision 2025, the United States will work toward achieving sustainable, equitable, and resilient control of the HIV/AIDS epidemic. The new PEPFAR Strategy will support the international community's efforts to put countries on track to reach the Sustainable Development Goal 3 target of ending the global AIDS epidemic as a public health threat by 2030, through the attainment of key milestones by 2025. The PEPFAR Strategy will be closely coordinated with the Global AIDS Strategy 2021-2026, recently released by UNAIDS and adopted by the countries, and the post-2022 Global Fund Strategy to optimize complementarity, value for money, and impact.

Under the new Strategy, by 2025, all PEPFAR-supported countries will have:

- 1) Reached the UNAIDS 95-95-95 targets for all ages, genders, and population groups; countries that have already achieved 95-95-95 will be supported to sustain their progress.
- 2) Targeted approaches in place to monitor and address new HIV infections among key populations and younger populations.
- 3) Sustainability plans supporting an HIV/AIDS response that ensures critical policies are in place and that countries and communities can lead with the capacity to deliver prevention and treatment services through local partners and adapt, innovate, and endure in the face of adversity.

To achieve its vision of sustained, equitable, and resilient control of the global AIDS epidemic, as well as continue to assist countries and communities to leverage the robust PEPFAR-supported public health platform to confront other current and future health threats that impact people living with HIV, the PEPFAR Strategy will focus on three core goals, each supported by several priority objectives.

### **Goal 1: Accomplish the Mission – 95/95/95 - Sustained, Equitable, People-Centered HIV Prevention and Treatment Services**

To achieve and sustain control of the HIV/AIDS epidemic, PEPFAR will continue to deliver equitable, people-centered HIV prevention and treatment services for millions of men, women, and children. This goal will be reached through a focus on the following priority objectives.

**Objective 1.1** *Meet clients where they are with what they need through differentiated HIV service delivery to maintain/improve access, ART continuity, and outcomes*

**Objective 1.2** *Achieve durable viral suppression for clients on ART, including children and the young and/or asymptomatic, to improve their health and prevent onward transmission*

**Objective 1.3** *Drive down HIV infections, including for key affected populations, through robust, targeted prevention and care programs embedded within the community*

**Objective 1.4** *Sharpen approaches for case-finding, recency testing, public health surveillance, and outbreak response to quickly identify and contain new HIV cases*

**Objective 1.5** *Pinpoint and address key barriers to HIV service access, uptake, and continuity, including through community-led monitoring and other means of direct client engagement*

**Objective 1.6** *Embrace innovation, including rapidly onboarding new scientific breakthroughs and technologies*

## **Goal 2: Build Enduring Capabilities - Resilient and Capacitated Country Health Systems, Communities, and Local Partners**

PEPFAR will continue to strengthen the partner country and community systems that are required to sustainably control the HIV epidemic, and which can be leveraged to deliver effective, efficient, and sustainable health care. These investments will enhance global health security by not only equipping countries to confront the HIV epidemic, but also to prepare for and address other diseases and outbreaks, through a focus on the following priority objectives.

- Objective 2.1** Bolster the resilience of partner country laboratory systems to avoid HIV resurgence, tackle other health challenges, expand overall access to health care, and adapt to adversity*
- Objective 2.2** Institutionalize robust and transparent partner country surveillance and data capacity to drive and monitor HIV response, disease detection, and outbreak control*
- Objective 2.3** Capacitate an enduring cadre of partner country public health leadership and healthcare and community health workforce*
- Objective 2.4** Institutionalize a next generation, client-centered health care supply chain that is more responsive, efficient, and sustainable, including through local private sector partnerships*
- Objective 2.5** Embed greater health service delivery in the community through local partners, enabling their comparative advantage in targeted service delivery and resilience in the context of adversity*

## **Goal 3: Broaden the Base of Support - Partner for Greater Impact, Burden Sharing, and Sustainability**

PEPFAR, leveraging the power of its position with the U.S. Department of State to convene across the U.S. government and multiple sectors, will continue to forge and foster partnerships with partner country governments, civil society (including faith-based and community organizations), the private sector, multilateral institutions (including the Global Fund, UNAIDS, WHO and others), and people living with HIV. These partnerships will enable PEPFAR to broaden, deepen, and institutionalize its impact with greater effectiveness, efficiency, and sustainability, through a focus on the following priority objectives.

- Objective 3.1** Achieve strategic alignment and complementarity across all available HIV and broader health resources to maximum impact and value of PEPFAR, Global Fund, partner country and other donor investments*
- Objective 3.2** Link HIV service delivery plans to relevant health issues and coordinate with key multilateral institutions in support of Sustainable Development Goal 3*
- Objective 3.3** Capitalize on private sector core capacities, investments, and innovations for greater program efficiency and effectiveness*
- Objective 3.4** Support and utilize the unique assets and capacities of communities, including faith-based organizations, civil society organizations, and people living with HIV, to drive meaningful and sustained impact*
- Objective 3.5** Leverage the very best of American capacity and ingenuity, including the U.S. scientific community, academic institutions (including HBCUs), and faith- and community-based organizations*
